**At Central Mississippi Medical Center we know how important it is to return to a normal life and your loved ones as soon as possible after spinal surgery. That's why Central Mississippi Medical Center is the first hospital in the state to offer the O-ARM® MULTIDIMENSIONAL IMAGING SYSTEM.**

The O-ARM® provides neurosurgeons and orthopedic surgeons with real-time, 3-D images and fluoroscopic imaging. Using these images, surgeons can view the patient anatomy while operating, monitor surgery status and verify surgical changes before the patient leaves surgery.

As a result, patients undergoing procedures may experience less invasive surgeries, avoid damage to healthy tissue, faster recovery time with less pain and improved results.

**For more information on the O-ARM®, contact  
Central Mississippi Medical Center at 601-376-1000.**
